# SEC³URE GO!

Contactless Check-in. Visible Compliance.

IntelliCentrics

Your kiosk serves as an access control point to help you enforce the "no badge, no access" policy. However, if the computer system is down or the printer runs out of paper, the cascading effect of a non-functioning kiosk could have a negative impact on your facility's compliance.

SEC³URE GO!, our wearable technology, was created to make check-in easy, fast and contactless for all, while raising the level of compliance. The digital badge visually displays the user's trusted status, as soon as they are checked in from their SEC³URE mobile app. Because check-in doesn't require a kiosk, it also reduces the risk of surface contamination.

When you set up SEC³URE GO! as your primary check-in method:

- You offload maintenance work at the kiosk.
- You improve visitor experience and compliance together.
- Compliance becomes visible so your staff know who's trusted to be onsite.

SEC³URE GO! is available on our SEC³URE Ethos technology platform, which helps healthcare facilities speed up time to revenue and save costs.

Are you ready to GO? Get started today!
